

# AiM Motor Pool

Manage vehicle availability and scheduling within AiM

AiM Motor Pool provides visibility into available vehicles using a visual Gantt-like view to support reservation and scheduling decisions. Integrated with AiM Operations & Maintenance, Motor Pool allows managers to schedule vehicle maintenance and associate vehicle usage costs with jobs when needed—without relying on a separate system.

As part of the AiM Integrated Workplace Management System (IWMS), Motor Pool operates within a unified platform alongside other facilities management capabilities.

## Operational Challenges Motor Pool Helps Address

- **Limited Visibility into Vehicle Availability**  
Without a centralized view of available vehicles, it can be difficult to quickly determine availability, potentially delaying reservation decisions and requests.
- **Disconnected Vehicle Scheduling and Maintenance**  
When vehicle usage and maintenance are managed separately, coordinating schedules becomes more complex and may increase the risk of missed or inconsistent maintenance.
- **Unrecovered Vehicle Usage Costs**  
If vehicle rental or usage costs are not associated with jobs, billable work may not fully reflect the true cost of services provided.

## Core Capabilities

### Vehicle Availability & Scheduling

- Visual, calendar-based view of available vehicles
- Vehicle reservation and rental requests by employee, contractor, or organization

### Maintenance Integration

- Schedule vehicle maintenance within AiM Operations & Maintenance
- Coordinate vehicle availability alongside maintenance activities

### Cost Association

- Optional linking of vehicle usage costs to jobs

### Vehicle Data Management

- Vehicle asset profiles
- Vehicle attribute tracking

## Support Confident Motor Pool Decisions

Motor Pool helps managers understand which vehicles are available, coordinate usage with maintenance scheduling, and account for vehicle-related costs within AiM—without managing a separate system.

- Gain visibility into vehicle availability to support reservation decisions
- Coordinate vehicle usage and maintenance scheduling within a single system
- Associate vehicle usage costs with jobs when needed
